Zolotar L. Methodology of creation of the cast bimetallic composition for making pistons of advanced ICE / L. Zolotar, O. Akimov, B. Taran // Internal combustion

engines. – 2010. – № 1. – P. 99-101.

The most perspective material for making pistons of engines with the high degree of forcing is casting cast-iron with titanitic composition. The method of improvement the diffusive connections in the cast cast-iron – titanitic composition is offered. This method includes one preliminary liquidphase metallization of composition constituents. Tabl.1. Bibliogr. 3 names.
