Matievsky D.D. A ways to provide perspective environmental norms in ICE through the use of mixed biofuels / D.D. Matievsky, S.S. Kulmanakov // Internal combustion engines. – 2010. – № 2. – P. 96-99.

This article describes the results of scientific studies on the effect of oxygenated mixed fuels on indicator's indexes process, fuel economy and emissions of toxic components in exhaust gases of a diesel engine. The presence of chemically bound oxygen in the molecule of the fuel can dramatically reduce the amount of harmful emissions. The results of the diesel's 1CH13/14 tests are presented. Tests were conducted on mixtures of methyl ester of rapeseed oil, ethanol, diesel fuel and rapeseed oil can assess prospects for ecological characteristics improvement in workflow presented.
