Gutarevich U.F. Developments of the team at the department of "Engines and Heat Engineering" in the National Transport University in the field of diesels building / U.F. Gutarevich, A.G. Govorun, V.I. Dmytrenko // Internal combustion engines. – 2011. – № 1. – P. 75-80.

The main research works at the chair of "Engines and Heat Engineering" in the National Transport University during the last 50 years are considered. The direction of this works was the creation of delivery systems and adjustment systems in diesels. One of the developed device which was managed by prof. Dolganov K.E. was hydraulic adjuster with centrifugal sensitive element for a fuel pumps with the batching by cutting-off. The adjuster allowed to have a defined speed characteristics of a diesel.
