Levterov A.M. IPMash NASU to diesels building / A.M.

Levterov // Internal combustion engines. – 2011. – № 1. –

P.84-86.

It is mentioned that in a process of districting claims to technical level of diesels the range of problems and tasks also expended. Among them are life gain, search for new materials, modeling and incylinder's processes organization and heat-mass exchange processes. To solve all this problems the sector of heat engines was established at the Institute of the problems in mashinebuilding NASU. The most powerful reseaech works of the institute were the study of the working cycles and processes in facility and devices, development the new gas and multipower equipment for gas-diesel engines. 9.
