Marchenko A.P. Reception corundumelektret at galvanoplasma to processing details from aluminium alloys /

A.P. Marchenko, V.V. Shpakovsky, V.V. Staricov // Internal combustion engines. – 2011. – № 2. – P. 127-130.

The mode of reception elektret on details from aluminium alloys by a mode galvanoplasma processings, and also results of experimental measurement of firmness of a superficial charge are considered. It is established, that the firmness of a superficial charge corundumelektret on details from an aluminium alloy has made $-3,9 \cdot 10^{-8}$ Kl/sm². Thus the quantity{amount} elektrons, forming a superficial charge and determining size elektret effect has made $\approx 24,34 \cdot 10^{10}$ 1/sm². Il. 3. Bibliogr. 9 names.
