

ECONOMIC ANALYSIS OF INTERNATIONAL RELATIONS

Dikhtenko O.O., Cherepanova V.O., Pererva P.G.

National Technical University «Kharkiv Polytechnic Institute», Kharkiv

The study of international relations at all stages of their development is an important and difficult task in view of the great dynamics of events, their randomness of occurrence and change. In this regard, the most important place in the study of international relations is occupied by political analysis - a universal method in the study of all branches of humanitarian knowledge of world politics and international relations, including in determining the international situation on a global and regional scale. Economic analysis of international relations is an analytical-synthetic study that combines the division of the object under study into its component parts and the unification of these parts at a new cognitive level. At the same time, economic analysis is a complex use of various methods of information transformation. At the same time, a kind of starting point for the analysis should be considered a situation, a problem or some kind of information transformation. At the same time, a kind of starting point for the implementation of the analysis should be considered a situation, a problem or some kind of a contradiction that requires their resolution in international relations. Clarification of the nature of problems or contradictions is the main factor determining the desired meaning.

At the same time, analysis is a complex use of various methods of information transformation. At the same time, a kind of starting point for the analysis should be considered a situation, a problem or some contradiction that requires their resolution in international relations. Clarification of the nature of problems or contradictions is the main factor determining the desired meaning. The analysis of the international situation makes it possible to predict international relations in specific directions or in general. A political forecast is a probable, scientifically based judgment about the possible states of the political process and international relations in the near and long term. Situational analysis of international relations is one of its types. It includes three stages:

Step 1: Create a scenario for the situation to be studied.

Step 2: Obtaining on its basis a certain amount of diverse expert assessments of the situation.

Step 3: Preparation of a final document that critically summarizes these assessments.

The advanced information obtained as a result of the study of the international situation affects the decision-making process in international relations. This is one of the most complex actions in the course of international cooperation, its effectiveness.
