Ukraine, as an independent nation, prioritizes military security to maintain a strong defense and readiness to protect national interests. A crucial aspect of this strategy involves updating the Military Doctrine, which outlines the core principles of military policy and how they are put into action. This study, based on Presidential Decree No. 555/2015, delves into the key elements of this doctrine, focusing on the role of the defense-industrial complex and the adoption of a spherical approach to military organization. Emphasis is placed on technical, environmental, and spiritual factors, all of which are integral to modern military strategies.

The main part of the research centers on three critical areas within the military doctrine: technical aspects, environmental considerations, and spiritual dimensions. A comprehensive understanding of these aspects is essential in shaping a spherical approach to military affairs. By enhancing our grasp of these elements, we can develop more effective strategies to bolster Ukraine's defense capabilities and ensure national security. The technical realm plays a critical role in the functioning of the military sphere under the new military doctrine. It involves human-induced changes in technical and technogenic objects such as buildings, roads, machinery, and more. Key sectors within the technical domain that significantly impact the military sphere include military equipment, nanotechnology, and armaments. Environmental protection ranks among the top priorities of the military doctrine.

The ecological domain manages the interrelationship between humans and nature, aiming to prevent ecosystem and landscape degradation. In the cultural and social context, the spiritual realm holds significant influence over the military sphere. It encompasses the spirituality of the population, including traditions, mentality, spiritual culture, military tradition, and citizens' readiness to defend the homeland. The most crucial sectors in the spiritual domain include the religious sector, chaplaincy, and cultural sector.

Therefore, based on this, the following conclusions can be drawn: Ukraine's new Military Doctrine, as defined by Presidential Decree No. 555/2015, embodies a spherical approach to structuring the military sphere, encompassing technical, environmental, and spiritual aspects. The technical sphere, with its key components being the quality of military equipment, nanotechnology, and armaments, plays a crucial role in enhancing national security and defense. The environmental sphere emphasizes the need for nature conservation and ensuring harmony between humans and the environment. The spiritual sphere, which includes the role of the religious sector, chaplaincy, and cultural aspects, is a significant factor in shaping a strong military tradition and citizens. To further develop and improve Ukraine's military sphere, ongoing exploration of these three spheres is necessary.

Analyzing the military sphere from different perspectives can contribute to enhancing the effectiveness of defense policy and ensuring national security.
