

**PRIORITY DIRECTION OF EDUCATION OF FOREIGN STUDENTS
STUDYING IN THE SPECIALTY «CIVIL SECURITY»**

Vambol S.O., Yevtushenko N.S., Liu Yujun

National Technical University «Kharkiv Polytechnic Institute», Kharkiv

The development of the export potential of higher education is recognized as one of the most important strategic directions of the state policy of Ukraine. Strengthening the authority of Ukrainian higher education, increasing the attractiveness of Ukrainian higher education institutions on the world educational market increases the competitiveness of the national education system, strengthens the country's position in the world community due to the spread of the achievements of domestic science. The number of foreign applicants can be called one of the most important indicators of the quality and attractiveness of the national education system. The development of international cooperation with foreign educational institutions and organizations in the field of science and education is one of the priority areas of work of the National Technical University of NTU "KhPI". The Department Occupational and Environmental Safety of the National Technical University "Kharkiv Polytechnic Institute" trains foreign students in the preparation of bachelor's and master's degrees in the specialty 263 – "Civil Safety" from the educational program – Occupational Safety. Foreigners from different countries (China, Congo, Israel, Turkmenistan, Azerbaijan) studied and are studying at the department. Education of foreign citizens is also carried out in English. The study program meets modern international standards of higher education.

The issue of civil safety in the context of labor protection today is more relevant than ever at both the state and global levels. It is difficult to imagine any production that is successful on the world market in its industry with a careless attitude of its management towards the organization of labor protection [1]. The department trains specialists who are able to ensure effective management of occupational safety and health at work, who quickly and clearly make decisions and are able to implement them in practice. Graduates of the department receive all the necessary knowledge and skills that give them confidence in their future professional activities in any modern enterprise.

The Department Occupational and Environmental Safety has sufficient scientific, educational and methodological potential to carry out the tasks of training new engineering personnel and developing scientific activities. The need for specialists with professional training in occupational safety and health in the world is quite high. Many employers from foreign countries send and pay for the training of promising students at the department in order to obtain highly qualified specialists in their future work.
